Stop Wasting Energy

Your thermostat controls about 50% of your energy bill - that's as much as the refrigerator, lighting, TVs, stereos and computers combined. Problem is, a lot of that energy is wasted heating and cooling an empty home.

Programmable thermostats were supposed to help, but 89% of people don't even bother to program them. They're just too complicated.

That's why we made Nest simple. It's so easy to use that 99% of Nests have custom schedules.

Easy to Install

Nest has a slim design, is enclosed by a solid stainless steel ring, and works with 95% of low voltage systems.

The Nest is designed to be a quick, easy install: three out of four people install Nest themselves in 30 minutes or less. If you're comfortable installing a light fixture, you can install Nest. Everything you need comes in the box. Too busy? Learn more about Nest Certified professional installation at 855-4MY-NEST.

Control from your Wi-Fi Connected Nest Account

Simply connect the Nest Learning Thermostat to your home Wi-Fi to control it from a smartphone, tablet or laptop. Change the temperature, see and adjust your schedule or settings, and see exactly how much energy you're using.

Detailed Energy History is available on the Mobile and Web app for the last 10 days and Nest sends you an energy summary every month with tips to help you save more.

Nest is secure, private, and reliable. Nest supports HTTPS, SSL and 128-bit encryption.

A Thermostat for the Smartphone Generation

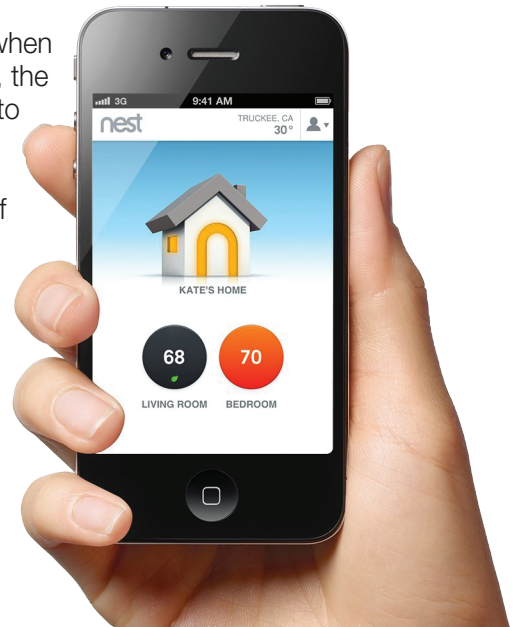

The Nest Learning Thermostat learns what temperatures you like, turns itself down when you're away and can be controlled from anywhere over Wi-Fi. By programming itself, the Nest thermostat can save up to 20% on your heating and cooling bill. You just have to teach it well.

The First version of the Nest Mobile app came out recently. There will be a series of updates in the coming months.

Here's some of what they can do right now:

- Change the temperature.
- Check and adjust your schedule.
- See and change your settings.
- Put Nest in and out of Away mode.
- Show you a Nest Leaf if you're saving energy.

The Nest Mobile app is currently available for iPhone, iPod Touch and iPad. The Android APP will be rolling out in December .

Personalized for Any System.

Nest knows one size doesn't fit all. So you tell Nest what system you have and System Match will turn on specific features to automatically help you save. Nest is the first thermostat that learns from you. After about a week, it knows your schedule and temperature preferences and automatically activates features to help you save energy.

Auto-Schedule

Turn it up, turn it down. Nest remembers what temperatures keep you comfortable and creates a custom schedule for your home. As your life and the seasons change, Nest automatically adapts.

Auto-Away

Nest uses its activity sensors to sense when nobody's home and turn itself to an energy-saving temperature. Auto-Away works in 90% of homes, even if Nest is in a room you don't use much.

The Nest Leaf

Whenever you make a choice to save energy - like choosing an energy-efficient temperature - you'll see a Nest Leaf. People who earn a Leaf every day save 10% more on average.

Airwave

Airwave automatically turns off the AC a few minutes early, but keeps the fan running. Airwave keeps you just as comfortable but runs your AC less.

Energy History

See exactly when your system was on with Energy History, then get a summary of your entire month's energy use with the Nest Energy Report. The more you know, the more you can save.

System Match

System Match automatically turns on specific features for your heating or cooling systems to make you more comfortable and help you save energy.

Early-On

Get the temperature you want when you want it. If your schedule says 72°F at 6 a.m., Early-On will start heating or cooling early so it'll be 72°F when your alarm rings.

Heat Pump Balance

Heat Pump Balance minimizes how often you need to use expensive auxiliary heat. Just choose whether you want more comfort or more savings, and Heat Pump Balance will automatically adjust when AUX comes on.

Filter Reminders

Nest reminds you to change your air filter based on how many hours your heat or AC has run. A clean filter can cut 5% off your heating or cooling bill.

True Radiant

True Radiant is a Nest exclusive that gives you a predictable schedule and even heat. No more frustrating guessing about what temperature to set when.
